

AMENDMENTS TO THE SPECIFICATION

Please replace lines 8-16, page 5 with the following amended paragraph:

Suitable substrate polypeptides are Type 1 membrane proteins with a single TMD orientated with an N terminal extracellular/lumenal domain. A substrate polypeptide may comprise a transmembrane domain which has a lumen proximal region having one or more of the residues of residues 138-144 of the Drosophila Spitz sequence SEQ ID NO: 1 (ASIASGA), or a luminal region having an equivalent conformation, structure or three dimensional arrangement to that of residues 138-144 of the Drosophila Spitz sequence SEQ ID NO: 1 (ASIASGA).

Replace Figure 1 with the attached replacement sheet.
